

## "COLONIAL" Upright Wheel

Measurements:  
16 in. diameter wheel  
31 in. from floor to  
orifice.  
17 1/2 in. wide by 15 in.  
deep.  
Weight 7.5 kg.  
(Packed in carton)

### FEATURES

1. The "Baynes" Spinning Wheels have the advantage; because of their compact design, to enable them to be transported on the seat of your car.  
The "Colonial" upright model is also convertible to an attractive standard lamp (refer to photo), that would enhance any home decor.
2. Graphite bearings which have been developed for our wheels, make for smoother running.
3. The main unit parts, such as the main wheel, Flyer, Maiden unit, Main base with legs, bobbins, etc., are factory assembled. The complete machine can be assembled with only a screwdriver (no glue required) in approximately 30 minutes, reading "easy to follow", step by step instructions.
4. A unique feature of the "Baynes" wheels is the patented flyer unit from which the bobbins are removed and replaced in seconds without disturbing the driving cord — a must for the learner spinner.  
The rear flyer support has a lever fitted for easier removal of the bobbin (5 oz. capacity).

The machines are handcrafted from New Zealand beech with a matched grain four-piece rim to eliminate shrinkage.

Eight fancy turned spokes add to its strength and good looks.

6. The complete units have been designed for balance, with an ideal working height of the flyer unit and widely spaced legs for maximum stability.
7. The treadle is placed in the precise position for your foot to work with a smooth "heel and toe" action, therefore reducing any strain on your ankle.
8. Fully adjustable feed speed is very easily adjusted by turning a knob on the "maiden bar".  
You cannot "overspin" on a "Baynes" wheel.  
The main driving cord tension is controlled with a threaded knob on the front maiden upright.
9. Spare bobbins are mounted on the machines for the ease of plying yarns together in one simple operation.
10. Standard spindle orifice (3/8" dia) for spinning a large range of fibres from very fine to medium.
11. Jumbo flyer head (5/8" orifice) and extra large bobbins are available for spinning very heavy yarns.
12. Built-in threading hook with wooden handle and also a "special" clip holder to locate the bobbins on to the Lazy Kate rack firmly.
13. The "Baynes" wheels which come complete with assembly and operating instructions and spare bobbins, offer you durability, quality spinning and are backed by more than ten years experience of manufacturing spinning wheels.  
Our wheels are exported to many countries including Australia, Britain, Canada, and America. Very popular wheels available at a realistic price.  
Insist on a "Baynes" quality spinning wheel that is manufactured by skilled furniture craftsmen.

## "SIMPLEX" Wheel

This wheel also has a 16 inch diameter wheel using the same bobbins and flyer system as the "Colonial" wheel.
