

This wheel is unique. Whilst it does all what any conventional spinning wheel will do, namely: spin – it does it that much better.

WHY???

The **PEACOCK WHEEL** has three speeds. Which means that the same amount of pedalling makes it go slow, medium or fast. No more over spinning because the machine is too fast for you! Just put the driving belt on a slower speed and you have got a lovely soft yarn.

Want to make fine lace weight wool? All you have to do is put the belt on fast speed and your flyer will put all the twist needed into the yarn. It holds it fast and yet is soft to the touch.

Like to spin lovely jumbo yarn? Change to very slow and the result is a very bouncy, thick (thick as you like) soft yarn.

All this and more is achieved on this tiny machine; the **PEACOCK WHEEL**. It not only has three speeds, one driving belt and extra big bobbins, but also runs on ball bearings and needs no oiling ever. The perfectly balanced wheel makes pedalling fun. Beautifully shaped, deep oiled N.Z. rimu, makes it an elegant piece of furniture to fit any setting. It dismantles easily, is simple to handle and packs away into its own carrying case*.

This superbly designed machine does your spinning the way you want it.

* Carrying case is an optional extra.
