

SLEEPING BEAUTY SPINNING WHEEL

ASSEMBLY INSTRUCTIONS:

All parts are machine sanded. Once assembled, the wheel can be stained as desired and then clear lacquered or oiled.

We recommend you read the instructions right through before starting to assemble - and then work step by step as detailed below:

Steps in Assembly:

- 1) Screw the legs into the metal sockets under the base. The long leg goes into the left end in the centre: The two short legs in the corners of the right end. Screw the two 'front' legs in as tightly as possible by hand and check that the leather hanger on each leg is each facing the other. If they do not face parallel and vertical, unscrew one or both legs and add or remove the paper spacer washers at the tops of the legs until the leathers do face each other when they are snugly tight. Any spare spacer washers may be put on the rear short leg where they do not matter. Fit two bobbin-holding pins (5/16") dowels in the base and drop a fibre washer over each.

- 2) Assemble the Mother-of-all by screwing the 2 pillars to the cross bar from underneath. (The Pillar on the near side has the leather with the large hole).

Screw in the tension adjusting screw and attach by the hinge to the high end of the base board. The two screw holes are already drilled.
